

Consulting – Regulatory Toxicologist

Best Consulting Firm is seeking an early career regulatory toxicologist. This position involves working in a team environment as a consultant with clients in the pharmaceutical, chemical or consumer product industries to advise on the best scientific approaches to expedite their products through marketing authorization, regulatory registration or develop safety and risk assessments. Responsibilities include, but are not limited to planning appropriate pharmacology-toxicology studies, interfacing with CROs, preparation of regulatory dossiers, safety data sheets, develop scientific positions, and participation in regulatory meetings. Some travel will be required.

This is a highly interactive position within a cross-functional professional environment. This position requires a proficiency in a broad variety of scientific and technical skills to perform hazard/risk assessment, hazard communication, and other toxicology-based assessments. The Scientific Toxicology Associate is expected to execute assignments in a timely manner to address science and business requirements. The ability to multi-task and prioritize multiple, diverse assignments is critical to success. The incumbent is expected to work in a collaborative environment and demonstrated an ability to take on activities of increasing responsibility.

The incumbent should have a PhD (preferably in pharmacology or toxicology) and have excellent verbal and written communication skills. It is expected that the incumbent will strive towards board certification in toxicology.
