

Module 7 Abstract: Toxicology of Organ Systems

Basic Topics in Toxicology eLearning Seminar

This Basic Topics eLearning module will focus on the principles of toxicology of key organ systems. The module offers a systematic basic review that will cover the anatomy, physiology, and pathophysiologies of the liver, lung, nervous system, kidney, cardiovascular system, skin, eye, and gastrointestinal system. In addition, classic toxicologic testing strategies for each of these systems will also be discussed as appropriate.
